From: Global Customer Care Subject: Outback Rebel software v3.1.3.4 USB

Product(s) Affected:

Outback Rebel

Scope:

This document provides software installation instructions for Outback Rebel v3.1.3.4 via USB.

Rebel v3.1.3.4 software is required when pairing the Outback A222 with Outback Rebel using ATLAS correction service.

Description of Changes:

- Atlas Integration.
- Font size is now adjustable.
- Changing between implements with different swath widths will no longer affect applied coverage maps.
- The Shift button can now be saved as a shortcut.
- Addition of the camera image flip feature.
- Ability to output higher NMEA messages.
